

# Discussion: Week 1 - Stats 100 A

Andrew Lizarraga

Department of Statistics and Data Science

June 25, 2024

# Initial Remarks

- ▶ This class is meant to be very straight forward. The homework will follow directly from the lectures, and the final will be very much like the homework.

# Initial Remarks

- ▶ This class is meant to be very straight forward. The homework will follow directly from the lectures, and the final will be very much like the homework.
- ▶ All of the homework and lectures will be posted on Bruinlearn.

# Initial Remarks

- ▶ This class is meant to be very straight forward. The homework will follow directly from the lectures, and the final will be very much like the homework.
- ▶ All of the homework and lectures will be posted on Bruinlearn.
- ▶ You can find additional resources on my site:  
[https://drewrl3v.github.io/teaching/sum24\\_stats100a/lectures.html](https://drewrl3v.github.io/teaching/sum24_stats100a/lectures.html), but it's not mandatory or necessary for this course

- ▶ All of the homework and lectures will be posted on Bruinlearn.
- ▶ You can find additional resources on my site:  
[https://drewrl3v.github.io/teaching/sum24\\_stats100a/lectures.html](https://drewrl3v.github.io/teaching/sum24_stats100a/lectures.html), but it's not mandatory or necessary for this course
- ▶ I'm the TA for discussion section 1C. Lucy is the TA for both discussion section 1A and 1B.
- ▶ If you haven't taken the ungraded quiz, I recommend doing so.

# Ungraded Quiz

- ▶ So far, the responses are more or less what I was expecting. I will post solutions to the ungraded quiz and we can discuss further on Thursday.

# Ungraded Quiz

- ▶ So far, the responses are more or less what I was expecting. I will post solutions to the ungraded quiz and we can discuss further on Thursday.
- ▶ If you took the quiz, I left a comment if you responded to question 8.

## Addressing Responses in Question 8

- ▶ This course will not cover ML/AI topics, but by the end of the course you should have the basics to understand:

## Addressing Responses in Question 8

- ▶ This course will not cover ML/AI topics, but by the end of the course you should have the basics to understand:
  - ▶ Diffusion processes (needed for models such as Stable Diffusion, Midjourney, ect.)

## Addressing Responses in Question 8

- ▶ This course will not cover ML/AI topics, but by the end of the course you should have the basics to understand:
  - ▶ Diffusion processes (needed for models such as Stable Diffusion, Midjourney, ect.)
  - ▶ Markov Chains which naturally leads to it's more general form: auto-regressive modeling (needed for large language models such as GPT, Claude, Mistral, ect.)

## Addressing Responses in Question 8

- ▶ This course will not cover ML/AI topics, but by the end of the course you should have the basics to understand:
  - ▶ Diffusion processes (needed for models such as Stable Diffusion, Midjourney, ect.)
  - ▶ Markov Chains which naturally leads to it's more general form: auto-regressive modeling (needed for large language models such as GPT, Claude, Mistral, ect.)
  - ▶ Stats 231A covers more advanced topics in machine learning and AI for those who are interested (Taught by Prof Wu.).

## Addressing Responses in Question 8

- ▶ This course will not cover ML/AI topics, but by the end of the course you should have the basics to understand:
  - ▶ Diffusion processes (needed for models such as Stable Diffusion, Midjourney, ect.)
  - ▶ Markov Chains which naturally leads to it's more general form: auto-regressive modeling (needed for large language models such as GPT, Claude, Mistral, ect.)
  - ▶ Stats 231A covers more advanced topics in machine learning and AI for those who are interested (Taught by Prof Wu.).
  - ▶ Lucy, myself and Prof. Wu all perform research in these areas. We're happy to discuss these topics outside of class.

# Addressing Responses in Question 8

- ▶ This course will not cover ML/AI topics, but by the end of the course you should have the basics to understand:
  - ▶ Diffusion processes (needed for models such as Stable Diffusion, Midjourney, ect.)
  - ▶ Markov Chains which naturally leads to it's more general form: auto-regressive modeling (needed for large language models such as GPT, Claude, Mistral, ect.)
  - ▶ Stats 231A covers more advanced topics in machine learning and AI for those who are interested (Taught by Prof Wu.).
  - ▶ Lucy, myself and Prof. Wu all perform research in these areas. We're happy to discuss these topics outside of class.
- ▶ Please note this discussion **is not mandatory** and may be treated as a supplementary resource. *I will try and record these discussions, for those who can't make it.*

## Additional Remarks

- ▶ This class is very diverse in the student population background.

## Additional Remarks

- ▶ This class is very diverse in the student population background.
- ▶ This means the material may be too slow for some and too fast for others. To mitigate this I'm proposing the following:

## Additional Remarks

- ▶ This class is very diverse in the student population background.
- ▶ This means the material may be too slow for some and too fast for others. To mitigate this I'm proposing the following:
  - ▶ This class is meant to be straight-forward and cover the basics of probability. This will remain the same and I expect nearly everyone to get an A.

## Additional Remarks

- ▶ This class is very diverse in the student population background.
- ▶ This means the material may be too slow for some and too fast for others. To mitigate this I'm proposing the following:
  - ▶ This class is meant to be straight-forward and cover the basics of probability. This will remain the same and I expect nearly everyone to get an A.
  - ▶ However for those of you who would like more of a challenge, but without the concern of a penalty, I can provide **Challenge Problems**. They will **not be graded** and will be much more difficult than the material in the class.

## Additional Remarks

- ▶ This class is very diverse in the student population background.
- ▶ This means the material may be too slow for some and too fast for others. To mitigate this I'm proposing the following:
  - ▶ This class is meant to be straight-forward and cover the basics of probability. This will remain the same and I expect nearly everyone to get an A.
  - ▶ However for those of you who would like more of a challenge, but without the concern of a penalty, I can provide **Challenge Problems**. They will **not be graded** and will be much more difficult than the material in the class.
  - ▶ With this being said, they don't count for anything in the class. So for the sake of your grades please focus on the homework first.

## Additional Remarks

- ▶ This means the material may be too slow for some and too fast for others. To mitigate this I'm proposing the following:
  - ▶ This class is meant to be straight-forward and cover the basics of probability. This will remain the same and I expect nearly everyone to get an A.
  - ▶ However for those of you who would like more of a challenge, but without the concern of a penalty, I can provide **Challenge Problems**. They will **not be graded** and will be much more difficult than the material in the class.
  - ▶ With this being said, they don't count for anything in the class. So for the sake of your grades please focus on the homework first.
- ▶ Please let me know your thoughts about this proposal.

# Homework

- ▶ Please submit a pdf. Ideally using *LaTeX*.

# Homework

- ▶ Please submit a pdf. Ideally using *LaTeX*.
- ▶ If you need to provide a handwritten submission, then please make sure it's clear and legible (check your ungraded quiz submission to see if the format you're submitting is clear).

# Homework

- ▶ Please submit a pdf. Ideally using *LaTeX*.
- ▶ If you need to provide a handwritten submission, then please make sure it's clear and legible (check your ungraded quiz submission to see if the format you're submitting is clear).
- ▶ Provide reasoning for your answers, don't just give a number or dodge explanations.

# Homework

- ▶ Please submit a pdf. Ideally using *LaTeX*.
- ▶ If you need to provide a handwritten submission, then please make sure it's clear and legible (check your ungraded quiz submission to see if the format you're submitting is clear).
- ▶ Provide reasoning for your answers, don't just give a number or dodge explanations.
- ▶ If you have a question about lecture or on the homework please email me in advanced so I can prepare materials for the discussion.

# Thank You / Questions
